

## English Summary:

Considering that the current COVID-19 pandemic is still severe, the violation of international commercial port epidemic prevention measures may affect the safety of the port area, so the Maritime Port Bureau has processed the amendment of "The Plan for Ship Quarantine Measures (Amendment 2.0)" to rule the epidemic prevention management of shipping companies, ships, crew, and review the penalty on them.

According to Commercial Port Law Subparagraph 3, Paragraph 1 of Article 36, this amendment increases item 6 to announce that failure to comply with the port area's epidemic prevention operation regulations during the epidemic prevention period is an act of obstructing port area safety.
